How to Use This Guide

STRENNO

This guide is designed to help you get fit by building simple habits you can actually maintain. Instead of relying on motivation or extreme workouts, it focuses on creating routines, systems and accountability that make consistency easier. You'll learn how to start small, stay on track when life gets busy and recover quickly when you miss a workout. Each section gives you practical tools and simple exercises that help train your mind so fitness becomes a habit you do without thinking – just like checking your phone when it pings with a notification. By using proven habit and psychology principles, this guide helps remove the mental barriers that usually stop progress, so staying fit feels natural and sustainable over time.

Section 1:

Identity-Based Fitness

How this helps you work towards your fitness goal.

Identity-based fitness means focusing on becoming the type of person who stays active, instead of only focusing on goals like losing weight or building muscle. When you start seeing yourself as a “fit person”, your actions naturally begin to match that identity. Working out, moving your body and making healthier choices become part of who you are, not something you have to force. This makes consistency easier and helps your long-term fitness goals.

Example:

- I want to become the type of person who prioritises losing fat.
- A fit person usually walks or exercises every day.
- One small action that proves this identity is doing a 5-minute stretch each morning.

Here is a simple exercise for you to complete.

Exercise: Fitness Identity

- I want to become the type of person who _____.
- A fit person usually _____ regularly.
- One small action that proves this identity is _____.

Why this works: Focusing on identity instead of outcomes (like weight loss) makes habits easier to stick with. When you see yourself as the type of person who is fit, showing up for workouts becomes natural – consistency increases and fitness goals are achieved more reliably.

How Strenno Helps: Strenno.ai reinforces your fitness identity by tracking your daily actions, sending encouraging reminders and highlighting small wins. This constant feedback helps you think and act like a fit person, making it easier to build lasting habits and to reach your fitness goals.

The Fitness Habit Loop

How this helps you work towards your fitness goal:

Fitness habits aren't about discipline, they're about patterns. Every fitness habit follows a loop:

Cue -> Craving -> Action -> Reward.

If a habit isn't sticking, the system needs adjusting — not you. Understanding this removes self-blame and helps you design your routines so they become automatic. This reduces reliance on motivation and increases consistency, helping you reach your fitness goals more reliably.

Good Example:

- Cue: Morning alarm goes off.
- Action: Do 5 push-ups.
- Reward: Feeling energized and checking off the habit.

Bad Fitness Example: Eating Junk Food

- Cue: Feeling stressed because you're not hitting your fitness goals.
- Action: Grab a bag of sweets or ice cream.
- Reward: Temporary comfort or pleasure.

Why this is bad:

The cue triggers an unhealthy habit that's easy to repeat, the action undermines your fitness goals, and the reward is short-lived — leaving you feeling guilty and discouraging healthy habits.

Here is a simple exercise for you to complete:**Exercise: The Habit Loop Cue**

- (Write down a specific signal in your day that can remind you to do your fitness habit. Examples: morning alarm, finishing lunch, feeling stressed, getting home from work.): _____
- Action (Write a small, specific action you can do right after the cue. Examples: 5 push-ups, 10 squats, 10-minute walk, stretching.): _____
- Reward (Write what positive feeling or result you'll notice immediately after doing the action. Examples: feeling energized, less stressed, proud, or checking off your habit for the day.): _____

Why this works: Habits follow a predictable loop: cue -> craving -> action -> reward. Understanding this pattern allows you to create small, consistent actions that become part of your daily routine automatically.

How Strenno Helps: Strenno.ai identifies your cues, suggests actions that fit your schedule and tracks the rewards you gain. It reinforces your habit loop daily, helping you turn small actions into consistent fitness routines. Strenno can also track triggers like stress or boredom, suggest healthier alternatives and help you replace unhealthy habits with better choices. Keeping you accountable and on track toward your fitness goals.

Make Fitness Obvious

How this helps you work towards your fitness goal:

If your workout isn't visible or planned, it's easy to forget or skip, especially on busy days. By creating clear cues for your fitness habits, you reduce mental effort and make it easier to start taking action. Over time, these visible triggers help you stay consistent and reach your fitness goals.

Example:

- After I brush my teeth in the morning, I will do 10 push-ups.
- After I finish lunch, I will do 15 bodyweight squats.
- After I make my morning coffee, I will go for a 5-minute walk.
- After I open my laptop for work, I will do a 2-minute stretch.

Here is a simple exercise for you to complete:

Exercise: Habit Stacking

After I _____, I will _____.

Tip: Choose a habit you already do every day as the cue and then attach a small fitness action to it. This makes the habit automatic over time and helps you build consistency toward your fitness goals.

Why this works: Pairing a new fitness habit with an existing routine makes it easier to remember and follow through. Tiny habits accumulate into real results over time without relying on willpower.

How Strenno Helps: Strenno.ai can remind you exactly when to do these micro-habits, track your streaks and suggest new habit stacks tailored to your daily routine. By reinforcing cues and keeping your habits visible, Strenno ensures your fitness routines stick and keeps you accountable, even on busy days.

Section 4: Make Fitness Attractive

STRENNO

How this helps you work towards your fitness goal:

If fitness feels like punishment, motivation fades quickly. Making workouts enjoyable creates positive associations, which helps you stick with your habits long enough to see real results. When fitness becomes fun or rewarding, it's easier to stay consistent and reach your goals.

Example:

- Fitness habit I want to build: Go for a 20-minute walk after work.

- Something enjoyable I'll pair with it: Listen to my favourite podcast or audiobook.

Other examples:

- Fitness habit: Do a 10-minute core workout -> Enjoyable pairing: Play my favourite playlist.

- Fitness habit: Stretch every morning -> Enjoyable pairing: Sip my favourite coffee while stretching.

- Fitness habit: Strength training 3x per week -> Enjoyable pairing: Reward myself with a smoothie afterward.

Here is a simple exercise for you to complete:

Exercise: Make It Attractive

- Fitness habit I want to build: _____
- Something enjoyable I'll pair with it: _____

Tip: Pair each new fitness habit with something you genuinely enjoy. This creates a positive link in your mind, making it more likely the habit will stick.

Why this works: Pairing a fitness habit with something enjoyable builds positive associations, making workouts feel less like a chore and more like a rewarding part of your day. Over time, this helps you stay consistent and achieve your long-term fitness goals.

How Strenno Helps: Strenno.ai can suggest enjoyable pairings based on your preferences, track which habits feel most rewarding and send reminders that make workouts fun instead of stressful. By keeping your habits enjoyable, Strenno helps you stay motivated, consistent and on track toward your fitness goals.

Section 5: Make Fitness Easy

How this helps you work towards your fitness goal:

Overly ambitious workout plans often lead to burnout and quitting. Focusing on small, manageable actions lowers resistance, builds momentum and keeps you consistent — even on low-energy days. Consistency, not intensity, is what drives long-term fitness results.

Example:

- Big goal: Complete a 45-minute full-body workout.

- 2-minute version: Put on workout clothes and do 2 minutes of bodyweight squats or stretching.

Other examples:

- Big goal: Run 3 miles -> 2-minute version: Walk around the block.

- Big goal: Do 50 push-ups -> 2-minute version: Do 5 push-ups.

- Big goal: 30-minute yoga session -> 2-minute version: Do 1-2 simple stretches.

Here is a simple exercise for you to complete:

Exercise: Shrink the Habit

- Big goal: _____
- 2-minute version: _____

Tip: Start with a tiny, non-intimidating version of your habit to make showing up easier. Often, once you start, you naturally continue beyond the 2 minutes.

Why this works: Starting small reduces mental resistance and makes it easier to be consistent. Over time, these tiny habits accumulate into meaningful fitness results, building confidence and momentum.

How Strenno Helps: Strenno.ai can adapt your workouts based on your energy and schedule, suggesting mini versions when you're short on time. It tracks your consistency, celebrates small wins and gradually nudges you toward completing your full workouts, keeping you accountable and on track every day.

Make Fitness Satisfying

How this helps you work towards your fitness goal:

The brain naturally repeats behaviours that feel rewarding. By making fitness feel satisfying, you create positive reinforcement that keeps you motivated and consistent, even before physical changes appear. Tracking progress and celebrating wins strengthens your commitment and helps you stick to your routine long enough to see real results.

Example:

• We have included a fitness tracker for you that you can download and use to record your workouts, habits, and streaks. Download [here](#).

Here is a simple exercise for you to complete:

Exercise: Track Your Wins

Record your completed workouts, small wins, or any progress you notice this week. Note how each action made you feel or improved your energy, mood, or strength.

Why this works: When fitness feels rewarding, your brain reinforces the habit, making it more likely you'll repeat it. Visible progress, small wins, and positive feedback all strengthen motivation and consistency.

How Strenno Helps: Strenno.ai makes fitness satisfying by tracking your progress, celebrating streaks, and highlighting your wins. Whether it's a completed workout, a new personal best, or simply sticking to your habit, Strenno provides immediate feedback and encouragement, keeping you motivated, accountable and on track every day.

Section 7: Accountability Systems

How this helps you work towards your fitness goal:

Motivation and willpower are unreliable, especially during stress or busy schedules. Willpower fades, but accountability doesn't. Having someone or something tracking your habits adds structure and external support, making it much more likely you'll follow through consistently and stay on track toward your goals.

Example:

- Who will keep me accountable: My workout buddy.
- How often will I check in: Every evening.
- What happens if I skip: Do a short extra workout the next day.

Other examples:

- Who will keep me accountable: My AI coach Strenno.
- How often will I check in: Daily reminders and check-ins.
- What happens if I skip: Strenno adjusts my plan and motivates me to restart immediately.

Here is a simple exercise for you to complete:

Exercise: Accountability Plan

- Who will keep me accountable? _____
- How often will I check in? _____
- What happens if I skip? _____

Why this works: Accountability significantly increases follow-through. When someone or something is tracking your habits, it's easier to stay consistent, even on low-motivation days.

How Strenno Helps: Strenno, your AI fitness coach, acts as your built-in accountability partner. It checks in based on your schedule, tracks your completed workouts, and provides reminders, encouragement, and support if you miss a session. You can also invite friends and family to see your progress and join in your workouts, adding social motivation and making accountability more fun and effective.

Never Miss Twice Rule

How this helps you work towards your fitness goal:

Most people quit after one missed workout because of guilt or perfectionism. Missing once is normal, but missing twice is how habits disappear. Following the “never miss twice” rule keeps small setbacks from turning into long-term failure, protecting your consistency and momentum so you stay on track toward your goals.

Example:

- If I miss a workout, I will do a 10-minute walk later that day and restart immediately.
- If I miss a yoga session, I will do a 5-minute stretch before bed and get back on track the next morning.

Here is a simple exercise for you to complete:

Exercise: Reset Plan

- If I miss a workout, I will _____ and restart immediately

Tip: Have a quick, manageable alternative ready so you can reset immediately. This prevents guilt from turning into skipped days and keeps your habits consistent.

Why this works: Missing one workout is normal — missing twice can start a negative habit cycle. Resetting quickly after a missed session keeps your consistency intact, and over time, consistent effort produces real fitness results

How Strenno Helps: Strenno.ai automatically notifies you if a workout is missed and suggests a quick alternative so you can get back on track immediately. It tracks your progress, keeps you accountable, and reinforces the “never miss twice” mindset, helping you stay consistent and achieve your fitness goals.

Section 9:

Weekly Reflection

How this helps you work towards your fitness goal:

Without reflection, mistakes repeat and progress stalls. Weekly check-ins help you adjust your approach, improve efficiency, and stay aligned with your fitness goals. Taking time to review your habits allows you to learn from your successes and challenges, making it easier to stay consistent over time.

Example:

- What worked well? I completed 4 of 5 scheduled workouts this week.
- What was challenging? I struggled to find time for morning workouts.
- One improvement for next week? I'll shift workouts to the evening when I have more energy.

Here is a simple exercise for you to complete:

Exercise: Accountability Plan

- What worked well? _____
- What was challenging? _____
- One improvement for next week? _____

Why this works: Reflection helps you identify patterns, celebrate successes, and adjust your approach. Without taking time to review your habits, it's easy to repeat mistakes and miss opportunities to improve.

How Strenno Helps: Strenno.ai makes weekly reflection simple by tracking your workouts, noting patterns, and summarising your progress. It can highlight your successes, identify challenges and suggest small actionable adjustments for the next week. This helps you stay consistent and continue to improve toward your fitness goals.

30-Day Fitness Habit Challenge

How this helps you work towards your fitness goal:

Trying to change everything at once often leads to overwhelm and quitting. Focusing on one habit at a time builds confidence, consistency, and a strong foundation for long-term fitness success. Completing a single habit consistently for 30 days creates momentum, making it easier to layer on new habits and achieve lasting results.

Example:

- Walk 10 minutes every day for 30 days.
- Complete 10 push-ups daily for 30 days.
- Stretch for 5 minutes every morning for 30 days.

Here is a simple exercise for you to complete:**Exercise: My 30-Day Fitness Habit**

- My 30-day fitness habit: _____

Why this works: Focusing on one habit at a time reduces overwhelm and builds confidence. Consistently completing a single habit for 30 days establishes momentum, making it easier to add new habits and achieve long-term fitness goals.

How Strenno Helps: Strenno, your AI fitness coach, guides you day by day through your 30-day habit, sending reminders, tracking your streaks, and celebrating every completed session. If you miss a day, Strenno helps you reset quickly and stay on track, keeping you accountable and ensuring that by the end of 30 days, your new habit is firmly established.

Final Reminder

Congratulations on completing this guide! You now have the tools, exercises and strategies to build fitness habits that stick, stay consistent, and make progress feel natural. But knowledge alone isn't enough the key is action and accountability.

Strenno.ai is pre-launching soon and we don't want you to miss out! If you haven't already, make sure to join the waitlist today. By signing up early, you'll claim exclusive pre-launch gifts as a thank you for being among the first to join.

Don't wait! Secure your spot on the waitlist now and get ready to start hitting your fitness goals!

Fitness success comes from small actions repeated consistently, not perfection.

Build the habit first. The results will follow
